## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what constitutes the "open medial connecting member". It seems that this element is the same as the flange. If yes, this is a double inclusion.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by either Tarng-Lin (5105956) or Sachathmakul et al. (5551583). Lin teaches an adapter ring with female threads at portion 3, external male threads at portion 21, a resilient circumferential sealing flange where portion 21 is engaged.

Art Unit: 3727

Portions 56 and 53 in Figs. 1 and 2, together, meet the claimed limitations with respect to the adapter ring.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Tarng-Lin (5105956). Lin teaches an adapter ring with female threads at portion 3, external male threads at portion 21, a resilient circumferential sealing flange at portion where portion 21 is engaged.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Arai (5988923). Arai teaches an adapter ring with female threads at portion 112, external male threads at portion 221, a resilient circumferential sealing flange at portion 210 or similar portion in Fig. 7 with apertures 211 and 241 respectively.

7. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by DeJong et al. (6415937). DeJong teaches an adapter ring with female threads at portion 50, external male threads at portion 60, a resilient circumferential sealing flange at portion 68.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeJong. To the degree it is argued that DeJong does not teach a top chamber. It would have been obvious to one of ordinary skill in the art to eliminate portion 54 when it is not needed or when its function is not desired. See, Ex parte Rainu, 168 USPQ 375 (PTO Bd. Of App. 1969)..
